Ideate Phase – Ideation Workshop Sheet

Team Information

Team Name:	Student 1 (Roll No and Name)	Student 2 (Roll No and Name)	Student 3 (Roll No and Name)
StageSync	241701001 – Abhishek R	241701017 – Harini M	241701032 – Mohamed Ashwaaq Rafi

Problem Statement:

Event production teams (stage, lighting, sound, props and coordination roles) need a way to see one accurate, up-to-date stage plan, because information about changes is currently scattered across messages, documents, sketches and verbal discussions — causing last-minute rework and stress.

Target Users:

Stage / Production Managers, Lighting Team members, Sound / AV Team members, Art Directors, Event Coordinators and Event Organizers involved in college events, cultural programs and other live productions.

Brainstorming Rules

Focus on generating many ideas.

Do not criticize any idea during brainstorming.

Encourage creative and unusual ideas.

Build on ideas proposed by teammates.

Write or sketch ideas

Idea Generation (Brainstorming)

Idea No	Student 1 Idea	Student 2 Idea	Student 3 Idea
1	Shared digital whiteboard for the stage layout that all teams (stage, lighting, sound, props) can view and edit in real time.	Mobile app with per-team checklists (stage, lighting, sound) showing live status of each requirement.	QR-code based check-in at each stage zone so the plan auto-updates when a team starts setup.
2	Centralized web dashboard showing one live stage plan with department-wise layers for lighting, sound and props.	Formal approval workflow where the Art Director reviews and signs off on every team's submitted requirements.	Conflict-detection alerts when two teams' requirements overlap on the same stage area or time slot.
3	Timeline-based coordination view showing what each team must complete and by when.	Instant notification system that alerts affected teams the moment the stage layout changes.	Comment threads attached directly to each requirement for quick team-to-team clarification.
4	Drag-and-drop visual stage planner (Figma/Miro-style) with equipment icons for stage, lighting, sound and props.	Single “source of truth” portal to replace scattered WhatsApp groups and shared documents.	Offline-friendly mobile view so backstage crew can check the latest plan without reliable Wi-Fi.
5	Version-controlled stage plan	Role-based dashboard where	Post-event feedback form to

	with change history and inline comments per team.	each team sees only the requirements and deadlines relevant to them.	capture what coordination issues still came up, for the next production.

Idea 4				
Idea 5				

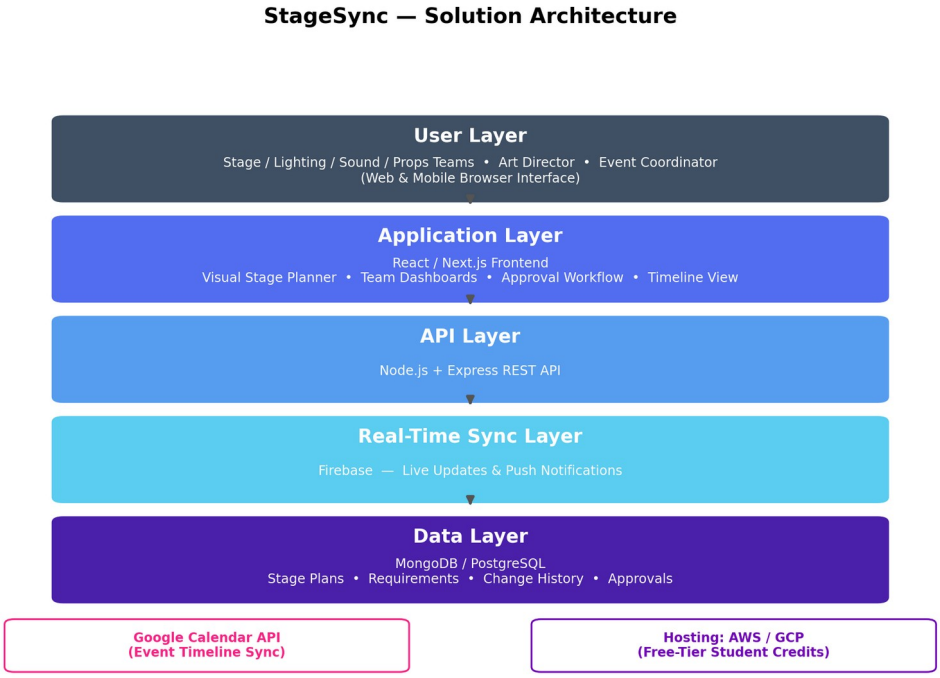

Top Idea Selected

Selected Idea: Idea 2 — A centralized web dashboard combining a visual, department-wise stage plan with a formal Art Director approval workflow. This idea directly answers the strongest insight from Review 1: teams need a single trusted source of truth AND a formal review/approval point, not just faster communication. (Update this once dot-voting is completed with your team.)

Concept Development

Feature	Description
Project Title	StageSync – Collaborative Stage Planning & Coordination Platform
Key Features	• Real-time visual stage layout planner (drag-and-drop, department-wise layers) • Centralized dashboard for stage, lighting, sound and props requirements • Art Director review & approval workflow with comments • Shared timeline view of event-preparation milestones • Instant change notifications to affected teams • Role-based access so each team sees what's relevant to them
Technology Required	React / Next.js (frontend), Node.js + Express (backend API), MongoDB / PostgreSQL (database), Firebase (real-time sync & notifications), Google Calendar API (timeline integration), hosted on AWS / GCP student credits.
Expected Benefits	• One trusted, up-to-date stage plan reduces miscommunication • Clear ownership speeds up approvals and cuts rework • Early visibility into changes reduces last-minute stress • Calmer, more confident teams going into event day

Solution Architecture Diagram

Data Flow: A team submits a requirement → it is stored in the database → reflected instantly on the shared visual plan via Firebase real-time sync → the Art Director reviews and approves or comments → approved changes trigger instant notifications to affected teams → the shared timeline view updates automatically for everyone.

Short Idea Pitch

Problem Addressed:

Stage, lighting, sound and props teams coordinate through scattered messages, documents and verbal discussions, causing unclear ownership, late changes and last-minute rework during event preparation.

Proposed Solution:

StageSync — a centralized web platform with a real-time visual stage planner, department-wise requirement tracking, an Art Director approval workflow, and instant notifications, giving every team one shared, trusted plan.

Key Benefit to Users:

Teams gain early visibility into changes and a formal approval checkpoint, cutting last-minute rework and giving everyone a calm, confident path into event day.
